MONDAY, MARCH 21, SCHEDULE

7:30–8:30 a.m. Registration and Vendor Fair

8:30–9 a.m. Welcome
Manel Mesulam, MD, CNADC director
Darby Morhardt, MSW, LCSW, CNADC education director
Christina Wienieke, BA, CNADC research project manager

9:15–9:55 a.m. Opening Remarks
Sharon Denny, MA, Association for Frontotemporal Dementias (AFTD)

9:55–10:15 a.m. Keynote Address: “Perspectives on FTD and PPA”
Bradley F. Boeve, MD, professor of neurology, Mayo Clinic, Rochester

10:15–10:30 a.m. Break

10:30 a.m.–noon Breakout Session 1

11:15–1:15 p.m. Lunch

1:15–2:15 p.m. Opening Remarks
Sharon Denny, MA, Association for Frontotemporal Dementias (AFTD)

2:30–3:30 p.m. Breakout Session 2

3:45–4:15 p.m. Closing Plenary: “Affirm Yourself for Caregiver Challenges”
Janet Edmunson, MEd, author of Finding Meaning with Charles: Caregiving with Love through a Degenerative Disease

AFTERNOON BREAKOUT SESSIONS FOR CAREGIVERS

CAREGIVERS ATTENDING THE CONFERENCE MAY CHOOSE TO ATTEND TWO BREAKOUT SESSIONS ABOUT A SPECIFIC PPA AND FTD TOPIC.

1) Newly Diagnosed FTD
A new FTD diagnosis brings on feelings of devastating loss and uncertainty. Families may feel overwhelmed trying to manage the personality and behavioral changes as they search for guidance about what to expect, how to plan for the future, and what living with FTD will be like. This group will focus on the experience of a new diagnosis, the first steps to take, and where to find ongoing guidance, resources, and support. It will explore both immediate concerns and longer-term issues about how this illness will affect a loved one and a family.

2) Newly Diagnosed PPA
Families may be uncertain about what to do next when a person is diagnosed with PPA. How should the frustrations and struggles resulting from changing communication abilities be addressed? There are important considerations for the present and the future that families should discuss early on. This group will focus on both the first steps and where to find ongoing guidance, resources, and support for the person with PPA and the family.

3) Legal Planning
Once a person is diagnosed with a dementia, family and friends should help him or her to make legal plans early on so that, if possible, the person is able to participate. Lack of insight can result in the person’s being unable or resistant to making these plans. In some cases, guardianship is necessary. Making legal plans for health care and long-term care includes discussing finances and property and naming another person to make decisions on behalf of the person. This group will discuss what families should know about legal planning and how to begin this process.

4) Managing Behaviors
The range of possible new behaviors of persons with bv (behavioral variant) FTD may be difficult for families to manage. This group will discuss environmental modifications, psychosocial approaches, and pharmacological interventions for inappropriate, impulsive, aggressive, compulsive, paranoid, and other challenging behaviors. It will also explore how these behaviors affect the family and how the family can cope.

5) Communication Challenges in PPA
The primary goal of speech and language therapy for PPA is to improve a person’s ability to communicate by helping him or her to use remaining language abilities, compensate for language problems, and learn other methods of communication. This group will discuss alternative and augmentative forms of communication, the use of low- and high-tech communication devices, and other methods of supporting language abilities.

6) Families with Children and Teens
Since PPA and FTD have a young average age of onset, a parent may become affected when children are still living at home. The stress brought on by the diagnosis is profound; families face uncertainty about not only the disease, but also its effect on children. This group will explore the experiences of children and teens who have parents with FTD or PPA.

7) Planning for Future and Palliative Care
Planning for future care can feel complicated and overwhelming for caregivers. There is a great deal to consider in exploring what care options work best for the person diagnosed and his or her family. This group will provide a comprehensive review of care options throughout the course of the disease. It will also review palliative approaches to care, a comfort-based approach that focuses on maximizing quality of life.

8) Starting a Support Group in Your Area
Support groups offer a safe environment in which family caregivers share their experience with others who truly understand. There is a need for more support groups specific to FTD and PPA. This group will discuss how — with help from the AFTD, the NAA, and the Alzheimer’s Association — to begin, sustain, and maintain a group specifically for caregivers of people with FTD or PPA.

9) Genetics and FTD/PPA
FTD and PPA can be described as inherited, familial, or sporadic. In inherited cases, each child or sibling of the person with the disease has a 50 percent chance of developing it. In a familial case, family members of an affected individual have an increased risk of developing the disease, although this increase is not well defined. The majority of FTD/PPA cases are sporadic, meaning the disorder develops by chance and the children or siblings of the affected individual do not have an increased risk for developing the disorder. This group will discuss the genetics of FTD and PPA, including what we know and what we still hope to uncover through future research.
