Dear Participant,

Winterlight Labs and Alector are conducting a speech assessment study. The purpose of the study is to evaluate if an in-home assessment of speech using an iPad application can detect changes in how the brain processes information. We are reaching out to you because we are interested in studying this technology in individuals with frontotemporal dementia (FTD). By analyzing how you speak, we may be able to detect changes in brain information processing that cannot be detected with other tests.

We would like to invite you to be part of this research study. If you agree to take part, Winterlight will send you an iPad in the mail. Over a 12 month period, you will complete a series of short assessments, using the Winterlight app. The assessments are simple and shouldn't take more than 15 minutes to complete. You'll complete the assessments every month for the first part of the study, and every three months for the second part of the study. There are no visits to any sites required. At the end of the study, you will get to keep the iPad!

If you are interested, please give us a call at 1-833-WINLABS (1-833-946-5227) or contact us via email at research@winterlightlabs.com

Winterlight Labs is a technology company that has developed a tablet-based application for assessing cognitive health by analyzing language features from short samples of speech.

Alector is a biopharmaceutical company developing medical treatments for patients with frontotemporal dementia (FTD) and other neurodegenerative diseases.

Sincerely,

Bill Simpson, PhD

Lead Investigator, Winterlight Labs
